New fusion molecules comprising polypeptide sequences that bind to IgG inhibitory receptor and native IgE receptor, useful for treating IgE-mediated hypersensitivity reactions, e.g. asthma or allergies, or autoimmune diseases.

Claim 35; Fig 7; 116pp; English.

The present invention relates to a fusion molecule comprising a first polypeptide sequence capable of specific binding to a native IgG inhibitory receptor consisting of an immune receptor tyrosine-based inhibitory motif (ITIM), expressed on mast cells, basophils or B cells, functionally connected to a second polypeptide sequence capable of specific binding directly or indirectly to a native IgE receptor

(FcepsilonR). Also provided are nucleotide sequences encoding such a fusion protein. The fusion melecules and compositions are useful for treating an IgE-mediated biological response, preferably an IgE-mediated hypersensitivity reaction, such as asthma, allergic rhinitis, atopic dermatitis, severe food allergies, chronic urticaria, angioedema or anaphylactic shock; or autoimmune diseases such as rheumatoid arthritis, type-I diabetes mellitus, or multiple sclerosis, and for preventing of, or symptoms resulting from, a type I hypersensitivity reaction in a subject receiving immunotherapy. The present sequence is a gammahinge-CHgamma2-CHgamma2-(CHepsilon2-CHepsilon3-CHepsilon3 fusion protein (designated GE2) of the invention

This invention relates to a novel ordered and repetitive antigen array used in the production of vaccines for infectious diseases. The invention also discloses a composition comprising a non-natural molecular scaffoold comprising a core particle selected from a core particle of natural origin and a core particle of natural origin and an organiser comprising at least one first attachment site, where the organiser is connected to the core particle by at least one covalent bond. Also disclosed is an antigen or antigenic determinant with at least one second attachment site, where the antigen or antigenic determinant site not naturally occurring with the antigenic determinant site not naturally occurring with the antigenic determinant site not naturally occurring with the antigenic determinant is an attachment site and where the antigen or antigenic determinant, where the second attachment site is capable of association through at least one non-peptide bond to the first attachment site and where the antigen or antigenic determinant and the scaffold interact through the association to form an ordered and repetitive antigen array. The invention also comprises a cost proteins capable of forming a capsid which comprises mutant Obeta cost proteins having an amino acid sequence selected from five amino acid sequences thilly defined in the specification. The compounds of the invention may the artification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120 TISKAKVQPREPQVYTLPPSRDELTKNQVSLT--CLVKGFYPSDIAVEWESNGQPENNYK 177

core particle of a non-natural origin; and (2) a core particle of natural coign; and (ii) an organiser is connected to the core particle by at least one covalent bond; (b) an antigen or antigenic determinant with at least one covalent bond; (b) an antigen or antigenic determinant with at least one second attachment site; where the antigen or antigenic determinant is attachment site is selected from: (i) an attachment, and where the second attachment site not naturally occurring with the antigen or antigenic determinant; where the second attachment site is capable of association through at least one non-peptide bond to the first attachment site; and where the association of through at least one non-peptide bond to the first attachment site; and where the antigen or antigenic determinant and the scaffold interact through the association to form an ordered and repetitive antigen or antigenic determinant and the scaffold interact through the association to form an ordered and repetitive antigen array. The composition is used in construction and as a vaccine for disease such as influenza, graft or immunisation and as a vaccine for disease such as influenza, graft versus host disease, IgE-mediated allergic reactions, anaphylaxis, adult correct through attribute and allergic reactions, anaphylaxis, acute laymanatory distress syndrome (ARDS), Crohn's disease, allergic asthma, correct laymanobastic letakemia, non-Hodgkin's lymphoma, Grave's disease, cargioimmunoproliferative lymphadenopathy, immunoblastic latekemia, non-Hodgkin's lymphoma, Grave's disease, captoimmunoproliferative lymphadenopathy, immunoblastic latekemia, non-Hodgkin's lymphoma, Grave's disease, captoimmunoproliferative lymphadenopathy, immunoblastic latekemia, non-Hodgkin's lymphoma, Grave's disease, congroimmunoproliferative lymphadenopathy, immunoblastic latekemia, non-Hodgkin's lymphoma, grave's disease, congroimmunoproliferative lymphadenopathy, and antigen conference of concerninal linker peptide which serves as the attachment point to a cleavage 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   æ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         355
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      360

protein

The present invention describes a method (M1) for identifying peptides that induce cytotoxic T-lymphocyte (CTL) response against immunoglobulin CE [1gE], comprising providing a test peptide (T) suspected of being able to bind to major histocompatibility complex (MHC) class I molecule, and cavaluating (T) for ability to elicit in a mammal a CTL response to canturally processed and presented 1gE peptides, where a peptide that induces such a response is identified. Also described are compositions: (C1) comprising at least one immunogenic peptide (I) identified by (M1); (C2) comprising at least one immunogenic peptide (I) identified by (M1); (C2) comprising at least one isolated polynuclosotide encoding (I); and (C3) comprising antigen-presenting cells that recognise at least one (I) Where C1-3 are able to bind to at least one MHC class I molecule and to calcif in a mammal and to naturally processed and presented (G2) comprising antigen-presenting cells that recognise at least one (I) where C1-3 are able to bind to at least one attractive, and can be used as inducers of a CTL response against 1gE, and in a cand can be used as inducers of a CTL response against 1gE, and in a correction such as allergic mammal. C1-3 are useful for modulating an 1gE-mediated condition in a mammal. C1-3 are useful for modulating an 1gE-mediated condition in a cuseful for treating atopic hypersensitivity conditions (such as allergic confining, allergic atopic hypersensitivity conditions (such as allergic atopic hypersensitivity conditions (such as anaphylaxis, and urticaria chives). The present sequence represents an 1gE heavy chain amino acid sequence, which is given in an example from the present invention

New immunoadhesin, useful for treating anthrax and rhinovirus, comprises chimeric toxin receptor protein linked to immunoglobulin heavy chain, and J chain and secretory component associated with the chimeric toxin receptor protein.

Disclosure; SEQ ID NO 45; 288pp; English

toxin receptor protein consisting of a toxin receptor protein linked to at least a portion of an immunoglobulin heavy chain with a J (joining) chain and secretory component (SC) associated with the chimeric toxin receptor protein. The immunoadhesin comprises a chimeric bacterial or viral toxin receptor protein and the immunoadhesin has plant-specific glycosylation. The immunoadhesin of the invention demonstrates virucide The invention relates to a novel immunoadhesin comprising a chimeric

The present invention relates to a fusion molecule comprising a first polypeptide sequence capable of specific binding to a native IgG inhibitory receptor consisting of an immune receptor tyrosine-based inhibitory motif (ITIM), expressed on mast cells, basophils or B cells, functionally connected to a second polypeptide sequence capable of specific binding directly or indirectly to a native IgE receptor (Ecopsilons). Also provided are nuclectide sequences encoding such a fusion protein. The fusion molecules and compositions are useful for treating an IgE-mediated biological response, preferably an IgE-mediated by persensitivity reaction, such as asthma, allergic rhinitis, atopic dermatitis, severe food allergies, chronic urticaria, angloedema or anaphylactic shock; or autoimmune diseases such as rheumatoid arthritis, crype-I diabetes mellitus, or multiple sclerosis, and for preventing of, or symptoms resulting from, a type I hypersensitivity reaction in a subject receiving immunotherapy. The present sequence is the human IgE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        7

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an immunoadhesin comprising: (a) a chimeric intercellular adhesion molecule (ICAM)-1 comprising a rhinovirus receptor protein linked to at least a portion of an immunoglobulin heavy chain; and (b) optionally a J chain and secretory component associated with the chimeric ICAM-1 molecule. The immunoadhesin has plant-specific of glycosylation and virucide activity. The immunoadhesin is useful for reducing infection by human rhinovirus (HRV) and hence the initiation or spread of the common cold by HRV. The immunoadhesin binds to HRV and reduces its infectivity, competing with cell surface ICAM-1 for binding creduces its infectivity, competing with cell surface ICAM-1 for binding creduces its infectivity, competing with cell surface ICAM-1 for binding creduces its infectivity in the immunoadhesin bin plants would be tetrameric, rather than dimeric.

Telease of viral RNA and formation of empty capsids. Expression of the immunoadhesin having multiple binding sites have a higher effective affinity for the virus, thereby increasing the effectiveness of the immunoadhesin. Association of secretory component and immunoglobulin J chain increases the stability of the immunoadhesin in the mucosal convironment. Production is significantly less expensive in plants than in animal cell culture and production in plants is safer for human use, since plants are not known to harbor any animal viruses. The present convirunce is that of a human immunoglobulin protein sequence, useful to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       STIQEGELASIQSELTLSQKHWLSDRTYTCQVTYQGHTFEDSTKKCADSNPRGVSAYLSR 364

This invention relates to a novel method for inducing an immune response against autologous immunoglobulin E (IgE) in an animal. The method comprises effecting simultaneous presentation of cytotoxic T lymphocyte (CTL) epitope and/or B-cell epitope derived from IgE, and T helper cell epitope (TH epitope) which is foreign to the animal, by antigen presenting cells (APCs) of the animal's immune system. The epitopes of the invention may be used as a vaccine against allergic diseases. The method of the invention is useful for inducing an immune response against autologous IgE in an animal, which is useful for downregulating autologous IgE in the animal. This method is useful in the prevention and treatment of allergic diseases such as anaphylaxis, allergic thinitis, asthma and atopic dermatitis. The present sequence represents the human IgE heavy chain C1-C2-C3-C4 domains used to create the epitopes of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           364

The present sequence is that of the human IgE epsilon chain constant cregion. The invention is based on the discovery that a polypeptide that includes the CH1 (i.e. constant domain 1 in the heavy chain) and/or CH4 comain(s) of an IgE molecule, coupled to a carrier can be used to induce in a mammal. Compositions are provided for inducing self-specific anti-IgE catiobdies. These containing fragments of the immunised mammal. Compositions are provided for inducing self-specific anti-IgE coupled to polypeptides containing fragments of the IgE molecule, coupled to polypeptides containing fragments of the IgE molecule, coppied to polypeptides containing tragments of the IgE molecule, coppied to 105, 5-105 or 5-95 of the present sequence, while CH3 domain, but not the CH3 domain. CH1 polypeptides have at least 95% identity to amino acids 11-42% or 317-42% of the present sequence. The anti-IgE antibodies containinate the pool of free IgE in the mammal's serum. Alternatively, a polymuclectide encoding a fusion protein compositions and carrier and IgE-derived polypeptide is administered The compositions and carrier and IgE-derived polypeptide is administered The compositions and search to an allergic chintitis or conjunctivitis, an allergic reaction to an allergic full claimed)

C scema or urticaria (all claimed)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            -- 105

                                                                                                                                                                                            ò
                                                                                                                                                                                                                                                                                                      ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a method of producing cytotoxic T lymphocytes (CTLs) specific for one or more non-tumour self antigen T cell epitopes. The method involves loading antigen presenting cells (APCS) having class I major histocompatibility complex molecules with the T cell epitopes, and culturing the CD8+ T cells with the APCs to activate precursor CD8+ T cells pitopes. The invention is useful for treating autoimmune disease including rheumatoid arthritis, psoriasis, lupus, autoimmune nephritis, multiple sclerosis, autoimmune thyroiditis, insulin dependent diabetes, Crohn's disease, inflammatory bowel disease,

graft versus host disease and transplant rejection and/or allergic disease such as food allergy, hay fever, allergic rhinitis, allergic asthma and venom allergy. The invention is also useful in cell therapy. The present sequence is human immunoglobulin E (IGE) constant region. This protein is used in the exemplification of the invention. Note: This sequence is stated to be the same as that shown in figure 10 (AAB35114) of the specification. However these sequences differ

                                                                                    ò
                                                                                                                                                                                                                                                                                                                                  The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal cubjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound which regulates the compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound to small molecule that regulates the activity of one or more of the polypeptides or their animal of one or more of the polypeptides or their animal of one or more of the polypeptides or their animal of one or more of the polypeptides or their anipodies. The polynucleotide or the compound that confication and a pharmaceutical composition comprising the one or more of molypeptides its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (SNI)) in an animal (e.g. gene for therapy). The sequence presented is a human protein (described in Table 3 therapy). The sequence presented is a human protein (described in Table 3 therapy). The sequence presented is a human protein (described in Table 3 therapy). The sequence presented is a human protein (described in Table 3 therapy). The sequence presented is a human protein (described in Table 5 therapy) is described by the sequence data for this patent did not form date of the print of the sequence data for his patent did not form date of the print of the sequence data for hi

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a novel immunoadhesin comprising a chimeric toxin receptor protein consisting of a toxin receptor protein linked to at least a portion of an immunoglobulin heavy chain with a J (joining) chain and secretory component (SC) associated with the chimeric toxin receptor protein. The immunoadhesin comprises a chimeric bacterial or viral toxin receptor protein and the immunoadhesin comprises a plant-specific glycosylation. The immunoadhesin of the invention demonstrates virucide and antibacterial activities and may be useful for reducing the binding of a viral or bacterial antigen to a host cell and thus for treating or preventing anthrax, as well as human rhinovirus infection which results in the common cold. The current sequence is that of the human immunoadhesion-related protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DNA encoding IGE H-chain and frags. is claimed (AAN40062). Transformant contg. the DNA is also new, esp. Escherichia coli IFO- 14284, -5 and -6. The transformant may be grown to produce a polypeptide of immunological or biological activity equivalent to that of the human IGE H chain. AAN40062 or frags. is pref. linked at a site downstream from a promoter, e.g. rec A promoter (see AAN40064). (Updated on 25-MAR-2003 to correct PA

This invention relates to a novel method for inducing an immune response against autologous immunoglobulin E (IgE) in an animal. The method comprises effecting simultaneous presentation of cytotoxic T lymphocyte (CTL) epitope and/or B-cell epitope derived from IgE, and T helper cell epitope (TH epitope) which is foreign to the animal, by antigen presenting cells (APCs) of the animal's immune system. The epitopes of the invention may be used as a vaccine against allergic diseases. The method of the invention is useful for inducing an immune response against autologous IgE in an animal, which is useful for downregulating autologous IgE in the animal. This method is useful in the prevention and treatment of allergic diseases such as anaphylaxis, allergic rhinitis, asthma and atopic dermatitis. The present sequence represents the human IgE heavy chain C1-C2-C3-C4 domains fused to the MIGIS fragment used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              244
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             304
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        424

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ઠે
```

```
The invention describes an isolated target immunoglobulin (Ig) derived protein comprising a target binding sequence and a portion of a heavy or light chain variable region and optionally a substitution, insertion or deletion as given in the specification. An isolated target Ig derived protein control of a heavy or light chain variable region comprising 10-125 or 10-75 contiguous amino acids chain variable region comprising 10-125 or 10-75 contiguous amino acids of the sequence comprising 10-138 or 77-107 amino acids, respectively, or its FR1, FR2, FR3 or FR4 fragment, or a portion of a heavy or light chain comprising 326-497 or 107 amino acids, respectively, or its FR1, FR3, FR4, CH1, CH2, CH3, hingel, hinge2, hinge3 or hinge4 fragment comprising 326-497 or 107 amino acids, respectively, or its FR1, FR2, FR3, FR4, CH1, CH2, CH3, hinge1, hinge2, hinge3 or hinge4 fragment composition. Also described are: an isolated nucleic acid encoding an isolated target Ig derived protein, a vector comprising the isolated conclaic acid; a prokaryotic or eukaryotic host cell comprising the isolated conclain and a carrier or diluent; an anti-idiotype Ig derived protein and a carrier or diluent; an anti-idiotype Ig derived protein comprising a target Ig derived protein, a method for that specifically binds target Ig derived protein; a method for corpan or animal, a medical device comprising the target Ig derived protein, an article of manufacture for human pharmaceutical or diagnostic use, comprising material and a container comprising a solution use, cumprising packaging material and a container comprising a solution
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New target Ig derived protein comprising a target binding sequence and a portion of a heavy or light chain variable or constant region, useful in preparing a composition for diagnosing or treating a target related condition, e.g. tumor.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            or lyophilized form of target Ig derived protein, and a method for producing an isolated mammalian target Ig derived protein. The target Ig derived protein is useful in preparing a composition for diagnosing or treating a target related condition in a cell, tissue, organ or animal, e.g. tumor. This is the amino acid sequence of variable heavy chain Negoin IgE. Note: This sequence differs from the version given in SEQ ID NO 35 in which the X residues have not been expanded to represent the whole CDR regions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        PSPFDLFIRKSPTITCLVVDLAPSKGTVNLTWSRASGKPVNHSTRKEEKQRNGTLTVTST 424

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A60764
Ig gamma-3 chain C region, form LAT - human
C;Species: Homo sapiens (man)
C;Accession: A60764
R;Huck, S; Lefranc, G; Lefranc, M.P.
Immunogenetics 30, 250-257, 1989
A;Title: A human immunoglobulin IGHG3 allele (Gmb0, bl, c3, c5, u) with an IGHG4
A;Reference number: A60764; MUID: 90007613; PMID: 2571587
A;Accession: A60764
A;Scatus: preliminary

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 90, Application US/10071485
Patent No. 6830752
GRNERAL INFORMATION:
APPLICANT: Buyee, Marie-Ange
APPLICANT: Sablon, Erwin
TITLE OF INVENTION: INTERFERON-gamma-BINDING MOLECULES FOR TREATING SEPTIC
TITLE OF INVENTION: SHOCK,
TITLE OF INVENTION: CACHEXIA, IMMUNE DISEASES AND SKIN DISORDERS
FILE REFERENCE: INNS:015
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             241 GGGSGGGSFTPPTVKILQSSCD----GGGHFPPTIQLLCLVSGYTPGTINITWLED--- 293
